Art Unit: 2134

DETAILED ACTION

1. Claims 1 - 16 are pending.

Response to Arguments

2. Applicant's arguments with respect to claim1, 7 and 11 have been considered but are most in view of the new ground(s) of rejection, as necessitated by amendment by applicant on 08/09/2007.

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically teachd or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 1 4, 6 14 and 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sasmazel et al. U.S. Patent No. (6,725,376) in view of Limisco U.S. Patent No. (6,662,228).
- 5. As per claims 1 and 11, Sasmazel teaches a logical security system for processing login and password data received from a client device during a server session in order to authenticate a user (Sasmazel, Col. 8 Lines 21 30, user authentication with user id and password) and a physical security system for processing Internet protocol (IP) address information of the client device in order to authenticate the

Art Unit: 2134

client device for the duration of the server session (Sasmazel, Claims 1 and 4, IP Address used as authentication information) but fails to teach the use of an internet server. However, in an analogous art Limisco teaches use of an internet server (Limisco, Col. 4 Lines 18 – 25, remote authentication by way of a server).

At the time the invention was made, it would have been obvious to use Limisco's Internet server authentication with Sasmazel's method of using electronic ticket and distributed server because it offers the advantage of securely transferring authorization data (Limisco, Col. 1 Lines 61 - 67).

- 6. As per claim 2 Sasmazel teaches a memory system for storing a list of each logged in user and a reference IP address collected during a login procedure (Sasmazel, Claim 4, IP Address used as authentication information).
- 7. As per claim 3, Sasmazel teaches wherein the physical security system compares the IP address of a received message with the reference IP address for the user (Sasmazel, Claim 4, IP Address used as authentication information).
- 8. As per claim 4, Sasmzael teaches wherein the physical security system terminates the session for the user if the IP address obtained from the received message does not match the reference IP address for the logged in user (Col. 9 Lines 29 35, rejection from web server).
- 9. As per claim 6, Sasmazel teaches the physical security system includes a proxy server module for comparing a portion of an IP address obtained from a received message against a like portion of the reference IP address for the logged in user (Sasmazel, Col. 9 Lines 9 15, checks validity of eticket).

Art Unit: 2134

10. As per claim 7, Sasmazel teaches storing in a memory system a reference Internet protocol (IP) address and associated login data whenever a new server session is initiated on the server from a client device (Sasmazel, Col. 7 Lines 59 – 67, Obtains IP address of user), receiving a message from a requesting user; obtaining login data accompanying the message, obtaining an IP address from a message header in the message, determining if the login data of the requesting user is currently listed in the memory system as an existing session with the server; and if the login data of the requesting user is currently listed, determining if the IP address from the received message matches the reference IP address associated with the login data of the requesting user (Sasmazel, Claims 1 and 4, IP Address used as authentication information) but fails to teach the use of an internet server. However, in an analogous art Limisco teaches use of an internet server (Limisco, Col. 4 Lines 18 – 25, remote authentication by way of a server).

At the time the invention was made, it would have been obvious to use Limisco's Internet server authentication with Sasmazel's method of using electronic ticket and distributed server because it offers the advantage of securely transferring authorization data (Limisco, Col. 1 Lines 61 - 67).

- 11. As per claim 8, Sasmazel teaches initiating a login procedure if the login data of the requesting user is not currently listed in the memory system (Sasmazel, Col. 8 Lines 21 30, initiating by obtaining user authentication with user id and password).
- 12. As per claim 9, Sasmazel teaches the further step of terminating all server sessions listed in the memory system having the login data of the requesting user if the

Art Unit: 2134

IP address from the obtained message does not match the reference IP address (Col. 9 Lines 29 – 35, rejection from web server).

- 13. As per claim 10, Sasmazel teaches examining a portion of the IP address of the requesting user; and determining if the portion matches a like portion of the reference IP address (Sasmazel, Col. 9 Lines 9 15, checks validity of eticket).
- 14. As per claim 12, Sasmazel teaches a memory system for storing a list of each logged in user and a respective reference IP address collected during a login procedure (Sasmazel, Col. 2 Lines 33 40, storage devices for user tickets).
- 15. As per claim 13, Sasmazel teaches the means for processing IP address information compares a login name and IP address of a received message against the list of logged in users and their respective reference IP addresses (Sasmazel, Col. 9 Lines 9 15, checks validity of eticket, which contains user id password and IP address).
- 16. As per claim 14, Sasmazel teaches the means for processing IP address information terminates the session for the user if the IP address obtained from the received message does not match the reference IP address for the logged in user stored in the list (Col. 9 Lines 29 35, rejection from web server).
- 17. As per claim 16, Sasmazel teaches the means for processing IP address information includes a proxy server module for comparing a portion of an IP address obtained from a received message against a like portion of the reference IP address for the logged in user (Sasmazel, Col. 9 Lines 9 15, checks validity of eticket).

Art Unit: 2134

- 18. Claims 5 and 15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sasmazel et al. U.S. Patent No. (6,725,376) and Limisco U.S. Patent No. (6,662,228) and in further view of Muratov et al. U.S PG-Publication No. (2003/0097596).
- 19. As per claims 5 and 15, Sasmazel teaches comparing IP addresses thru comparing authentication information transmitted and checking to see if the information including IP addresses match (Sasmazel, Col. 9 Lines 9 15, checks validity of eticket), but fails to teach deleting all instances of the logged in user. However, in an analogous art Muratov teaches deleting all instances of the logged in user (Muratov, Paragraph 0015).

At the time the invention was made, it would have been obvious to use Muratov's system for protecting data with Sasmazel's method of using electronic ticket and distributed server because it offers the advantage of protecting data from unauthorized access (Muratov, Paragraph 0017).

Conclusion

20. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within

Art Unit: 2134

TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Roderick Tolentino whose telephone number is (571) 272-2661. The examiner can normally be reached on Monday - Friday 9am to 5pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kambiz Zand can be reached on (571) 272-3811. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
